

DIORYX MARITIME CORPORATION

Athens, 29th April 2011

To Whom It May Concern.

Subject: **Advanced Marine Solutions**

We are the managers of 11 container fleet. Since we trade in a very demanding market considering the unparalleled engine performance we have chosen **Engine Monitoring System** from **AMS** in order to present immediate, accurate and in depth information for main engine as well as diesel generators condition. It is well known to the technical departments that conventional way of diagrams taken is not enough for complete evaluation.

In general, **AMS** provides heavy duty quality products fulfilling high informational standards, including engine parameters more than necessary. It is very important to note that **AMS** equipment can be easily installed and operated by ship crew due to the installation as well as the operation manual is more than detailed. Further it is exceptionally accurate and impressing every single info to the generated report resulting the engine crew to using same for preventing several damages to the engine(s), maintaining and keeping the engine closing to sea trials performance reducing its emissions as well.

As result of accurate performance outcomes the engine crew with corporation of head office will be able to achieve lower engine running cost. Finally the response of **AMS** technical team has a very professional approach covering all technical aspects within shortest possible time. Since we have excellent corporation with **AMS** more than 4 years we strongly recommend its systems to any ship operator without any hesitation. Feel free to contact with us for more info which may need.
