Subject: Optimize Engine Performance.

Dear Sirs,

The Engine Monitoring System is an excellent system where we can easily check the load balance of our vessels engines, thus avoiding cylinder overload and wear.

The results are provided in multiple ways making it easy to comprehend and take corrective actions. The graphs and barplots features are ideally projected through the software making even easier to identify possible deviations.

AMS is a customer oriented company and provides support and solutions on the spot for any clarification we may have.

Subsequently, we would recommend the EMS system to any Ship operator without any hesitation.

Yours faithfully,

TMS TANKERS LTD.

E. Sfakiotakis,
Technical Department
